What is upcycling? Upcycling is a process in which disposable or discarded items are repurposed to make valuable, useful, and new items. So, why bother to upcycle? Well, why recycle when you can upcycle? Although recycling is sometimes a better option, it is not always the case. For instance, more energy and resources are used in recycling a paper bag than making one, which is why upcycling may be the best choice to reduce your carbon imprint.

Think big and green. We, as creative individuals created usable and useful items from the things around us, so we must have a solution for upcycling them.

Have you ever felt so hungry that you wished there was food served for you right away? This bento box is perfect for kids and adults. It’s small enough that doesn’t take much space and is convenient enough that you can bring it anywhere you go. Also, it can keep you eating healthy at all times. It not only saves the environment but yourself as well!
BENTO BOX INSTRUCTIONS

1. \( \text{not milk? (Sara Lee)} \)

2. \( x^2 \)

3. BOXED WATER IS BETTER.

4. BOXED WATER IS BETTER.
