The idea I developed is a group of shapes that interlock with each other to create different objects; like lamps, curtains and other types of house decorations.

I was inspired by puzzle lamps; they are made by interlocked shapes to create a lamp.

The shapes would be printed in the inside of the box. This would make it easier for people to build the decorations.

The audience for this product is interior designers, anyone who enjoys building things, or people who are interested in decorating their homes. The purpose of this idea is to have fun while upcycling. Building objects with these shapes can be really fun, and at the end people can decorate their homes with what they created.
1. Repeat the shape and attach them together until it is big enough to cover the window.

2. Repeat the shape and attach them together until it is big enough to cover the window.

3. To create an sphere you need to use five pieces and not six, to build the structure.
